2. Title of Invention

Separating Commands And Data Using Logical Channels

3. Problem Solved

Modems require 2 type of information flow, one for commands intended for interpretation by the local modem, and one for tx data that should be passed on to the remote modem. Current implementations use command and data modes to distinguish when the information flow is for the local or remote modem.

This requires procedures to switch from one mode to another (some of which are patented), and overhead to implement these procedures. It also means that while a command is being executed, no data can be sent to the far end.

4. Previous Solutions

5. Solution

This new solution turns one physical channel into two logical channels. It does this by setting aside a group of hardware registers which pass messages about the data, one parameter of the messages being the channel number. By reserving one channel number for commands, and another for data, the information's destination can be indicated. This avoids the need for command and data mode and the procedures and overhead switching modes requires. It also means that a command can be sent followed immediately by data, and the data will not upset the command.

6. Differences/Advantages Over Previous Solutions

7. Status of Innovation

Idea If "Other", please specify

8. Product or program in which innovation will be used:

RL56CSM/3 (Tripac project)

9. Has anyone disclosed or does anyone plan to disclose your innovation outside the Company?

Yes No Don't Know

If "Yes", where: RL56CSM/3 Host Interface Spec

10. Has anyone proposed or does anyone plan to propose a product or program to a customer which includes your innovation?

Yes No Don't Know

If "Yes", when and how: Early June 97

11. Innovator signature(s): (Do not use black ink)
